

## DC Film Capacitors MKT Radial Potted Type

### FEATURES

- 10 mm lead pitch. Supplied loose in box and taped on reel or ammpack
- Material categorization: for definitions of compliance please see [www.vishay.com/doc?99912](http://www.vishay.com/doc?99912)

**RoHS  
COMPLIANT**

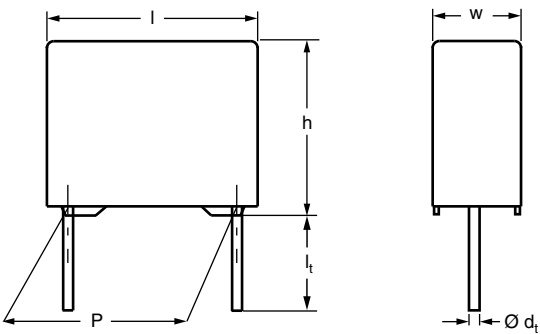

### APPLICATIONS

Blocking and coupling, bypass and energy reservoir

QUICK REFERENCE DATA	
Capacitance tolerance	± 10 %, ± 5 %
Capacitance range (E12 series)	0.0047 µF to 0.68 µF
Rated DC voltage	100 V, 250 V, 400 V, 630 V
Rated AC voltage	63 V, 160 V, 220 V, 250 V
Climatic testing class (according to IEC 60068-1)	55/105/56
Rated temperature	85 °C
Maximum application temperature	105 °C
Performance grade	Grade 1 (long life)
Leads	Tinned wire
Reference standards	IEC 60384-2
Dielectric	Polyester film
Electrodes	Metallized
Construction	Mono construction 
Encapsulation	Flame retardant plastic case and epoxy resin (UL-class 94 V-0)
Marking	C-value; tolerance; rated voltage; manufacturer's symbol; year and week of manufacturer; manufacturer's type

#### Note

**Notes**

• SPQ = Standard Packing Quantity

(1) Reel diameter = 356 mm is available on request

(2) H = in-tape height; P<sub>0</sub> = sprocket hole distance; for detailed specifications refer to packaging information: [www.vishay.com/doc?28139](http://www.vishay.com/doc?28139)

(3) Weight for short lead product only

## MOUNTING

### Normal Use

The capacitors are designed for mounting on printed-circuit boards. The capacitors packed in bandoliers are designed for mounting in printed-circuit boards by means of automatic insertion machines.

For detailed tape specifications refer to packaging information: [www.vishay.com/doc?28139](http://www.vishay.com/doc?28139)

### Specific Method of Mounting to Withstand Vibration and Shock

In order to withstand vibration and shock tests, it must be ensured that stand-off pips are in good contact with the printed-circuit board:

- For pitches  $\leq 15$  mm capacitors shall be mechanically fixed by the leads
- For larger pitches the capacitors shall be mounted in the same way and the body clamped

### Space Requirements On Printed-Circuit Board

The maximum space for length ( $l_{max.}$ ), width ( $w_{max.}$ ) and height ( $h_{max.}$ ) of film capacitors to take in account on the printed-circuit board is shown in the drawing:

- For products with pitch  $\leq 15$  mm,  $\Delta w = \Delta l = 0.3$  mm and  $\Delta h = 0.1$  mm
- For products with  $15$  mm  $<$  pitch  $\leq 27.5$  mm,  $\Delta w = \Delta l = 0.5$  mm and  $\Delta h = 0.1$  mm

Eccentricity defined as in drawing. The maximum eccentricity is smaller than or equal to the lead diameter of the product concerned.

## SOLDERING

For general soldering conditions and wave soldering profile, we refer to the application note:

“Soldering Guidelines for Film Capacitors”: [www.vishay.com/doc?28171](http://www.vishay.com/doc?28171)

### Storage Temperature

$T_{stg} = -25$  °C to  $+35$  °C with RH maximum 75 % without condensation

### Ratings and Characteristics Reference Conditions

Unless otherwise specified, all electrical values apply to an ambient free air temperature of  $23$  °C  $\pm 1$  °C, an atmospheric pressure of 86 kPa to 106 kPa and a relative humidity of  $50$  %  $\pm 2$  %.

For reference testing, a conditioning period shall be applied over  $96$  h  $\pm 4$  h by heating the products in a circulating air oven at the rated temperature and a relative humidity not exceeding 20 %.

CHARACTERISTICS

Capacitance as a function of frequency

Capacitance as a function of ambient temperature

Max. DC and AC voltage as a function of temperature

Impedance as a function of frequency

Max. AC voltage as a function of frequency

Max. AC voltage as a function of frequency

Max. AC voltage as a function of frequency

Max. AC voltage as a function of frequency

Max. AC voltage as a function of frequency

Max. AC voltage as a function of frequency

Max. AC voltage as a function of frequency

Max. AC voltage as a function of frequency

**Maximum RMS current (sinewave) as a function of frequency**

$U_{AC}$  is the maximum AC voltage depending on the ambient temperature in the curves “Max. RMS voltage and AC current as a function of frequency”.

Tangent of loss angle as a function of frequency

Insulation resistance as a function of the ambient temperature (typical curve)

Maximum allowed component temperature rise ( $\Delta T$ ) as a function of the ambient temperature  $T_{amb}$  ( $^{\circ}C$ )

<b>HEAT CONDUCTIVITY (G) AS A FUNCTION OF (ORIGINAL) PITCH AND CAPACITOR BODY THICKNESS IN mW/°C</b>	
$W_{MAX.}$ (mm)	HEAT CONDUCTIVITY (mW/°C)
	PITCH 10.0 mm
4.0	6.0
5.0	7.5
6.0	9.0

## POWER DISSIPATION AND MAXIMUM COMPONENT TEMPERATURE RISE

The power dissipation must be limited in order not to exceed the maximum allowed component temperature rise as a function of the free ambient temperature.

The power dissipation can be calculated according type detail specification “HQN-384-01/101: Technical Information Film Capacitors”, [www.vishay.com/doc?28147](http://www.vishay.com/doc?28147).

The component temperature rise ( $\Delta T$ ) can be measured (see section “Measuring the component temperature” for more details) or calculated by  $\Delta T = P/G$ :

- $\Delta T$  = component temperature rise ( $^{\circ}\text{C}$ )
- $P$  = power dissipation of the component (mW)
- $G$  = heat conductivity of the component ( $\text{mW}/^{\circ}\text{C}$ )

## MEASURING THE COMPONENT TEMPERATURE

A thermocouple must be attached to the capacitor body as in:

The temperature is measured in unloaded ( $T_{\text{amb}}$ ) and maximum loaded condition ( $T_{\text{C}}$ ).

The temperature rise is given by  $\Delta T = T_{\text{C}} - T_{\text{amb}}$ .

To avoid radiation or convection, the capacitor should be tested in a wind-free box.

## APPLICATION NOTE AND LIMITING CONDITIONS

These capacitors are not suitable for mains applications as across-the-line capacitors without additional protection, as described hereunder. These mains applications are strictly regulated in safety standards and therefore electromagnetic interference suppression capacitors conforming the standards must be used.

For capacitors connected in parallel, normally the proof voltage and possibly the rated voltage must be reduced. For information depending of the capacitance value and the number of parallel connections contact: [dc-film@vishay.com](mailto:dc-film@vishay.com)

To select the capacitor for a certain application, the following conditions must be checked:

1. The peak voltage ( $U_{\text{P}}$ ) shall not be greater than the rated DC voltage ( $U_{\text{RDC}}$ )
2. The peak-to-peak voltage ( $U_{\text{P-P}}$ ) shall not be greater than  $2\sqrt{2} \times U_{\text{RAC}}$  to avoid the ionization inception level
3. The voltage peak slope ( $dU/dt$ ) shall not exceed the rated voltage pulse slope in an RC-circuit at rated voltage and without ringing. If the pulse voltage is lower than the rated DC voltage, the rated voltage pulse slope may be multiplied by  $U_{\text{RDC}}$  and divided by the applied voltage.

For all other pulses following equation must be fulfilled:

$$2 \times \int_0^T \left( \frac{dU}{dt} \right)^2 \times \left( dt < U_{\text{RDC}} \times \left( \frac{dU}{dt} \right)_{\text{rated}} \right)$$

$T$  is the pulse duration.

4. The maximum component surface temperature rise must be lower than the limits (see graph “Max. allowed component temperature rise”).
5. Since in circuits used at voltages over 280 V peak-to-peak the risk for an intrinsically active flammability after a capacitor breakdown (short circuit) increases, it is recommended that the power to the component is limited to 100 times the values mentioned in the table: “Heat Conductivity”
6. When using these capacitors as across-the-line capacitor in the input filter for mains applications the applicant must guarantee that the following conditions are fulfilled in any case (spikes and surge voltages from the mains included).
7. For continuous use as series connection with an impedance to the mains, please refer to application note [www.vishay.com/doc?28153](http://www.vishay.com/doc?28153).

<b>VOLTAGE CONDITIONS FOR 6 ABOVE</b>		
<b>ALLOWED VOLTAGES</b>	<b><math>T_{amb} \leq 85\text{ }^{\circ}\text{C}</math></b>	<b><math>85\text{ }^{\circ}\text{C} &lt; T_{amb} \leq 105\text{ }^{\circ}\text{C}</math></b>
Maximum continuous RMS voltage	$U_{RAC}$	See "Max. AC voltage as function of temperature" per characteristics
Maximum temperature RMS-overvoltage (< 24 h)	$1.25 \times U_{RAC}$	$U_{RAC}$
Maximum peak voltage ( $V_{O-P}$ ) (< 2 s)	$1.6 \times U_{RDC}$	$1.3 \times U_{RDC}$

**Example**

$C = 330\text{ nF} - 63\text{ V}$  used for the voltage signal shown in next drawing.

$U_{P-P} = 40\text{ V}$ ;  $U_P = 35\text{ V}$ ;  $T_1 = 100\text{ }\mu\text{s}$ ;  $T_2 = 200\text{ }\mu\text{s}$

The ambient temperature is  $35\text{ }^{\circ}\text{C}$

Checking conditions:

1. The peak voltage  $U_P = 35\text{ V}$  is lower than  $63\text{ V}_{DC}$
2. The peak-to-peak voltage  $40\text{ V}$  is lower than  $2\sqrt{2} \times 40\text{ V}_{AC} = 113\text{ V}_{P-P}$
3. The voltage pulse slope ( $dU/dt$ ) =  $40\text{ V}/100\text{ }\mu\text{s} = 0.4\text{ V}/\mu\text{s}$   
This is lower than  $60\text{ V}/\mu\text{s}$  (see specific reference data for each version)
4. The dissipated power is  $16.2\text{ mW}$  as calculated with fourier terms  
The temperature rise for  $W_{max.} = 3.5\text{ mm}$  and pitch =  $5\text{ mm}$  will be  $16.2\text{ mW}/3.0\text{ mW}/^{\circ}\text{C} = 5.4\text{ }^{\circ}\text{C}$   
This is lower than  $15\text{ }^{\circ}\text{C}$  temperature rise at  $35\text{ }^{\circ}\text{C}$ , according figure "Max. allowed component temperature rise"
5. Not applicable
6. Not applicable
7. Not applicable
