

Evaluation Board for the 600 mA/1000 mA, 2.5 MHz Buck-Boost DC-to-DC Converters—ADP2503/ADP2504

### FEATURES

- ▶ Output current
  - ▶ 600 mA for the ADP2503
  - ▶ 1000 mA for the ADP2504
- ▶ Input voltage range: 2.3 V to 5.5 V
- ▶ Fixed output voltage range: 2.8 V to 5.5 V
- ▶ Switching frequency: 2.5 MHz
- ▶ 1.5  $\mu$ H inductor compatible
- ▶ Typical quiescent current: 38  $\mu$ A
- ▶ Automatic pulse skip mode
- ▶ Synchronization pin

### GENERAL DESCRIPTION

The ADP2503/ADP2504 adjustable output voltage evaluation boards are complete buck-boost converter solutions that test the [ADP2503/ADP2504](#), high efficiency, low quiescent current, step-up/step-down, dc-to-dc converters. These converters provide accurate ( $\pm 2\%$ ) regulation for load currents up to 1 A. The ADP2503/ADP2504 evaluation boards are available for all output voltages. Additional voltage options are available upon request from your local Analog Devices, Inc., sales office.

At high load currents, the ADP2503/ADP2504 use a current mode, fixed frequency PWM control scheme for excellent stability and transient response. To ensure the longest battery life in portable applications, the ADP2503/ADP2504 feature an optional power-saving pulse skip mode that reduces the switching frequency under light load conditions to save power.

## USING THE EVALUATION BOARD

The [ADP2503/ADP2504](#) evaluation boards are supplied fully assembled and tested. Before applying power to the evaluation board, follow the procedures in this section and refer to [Figure 8](#).

### SETTING UP THE EVALUATION BOARD

#### Jumper J6

Jumper J6 enables the part. Connect the jumper between Position 1 and Position 2 to enable the ADP2503/ADP2504. Connect a jumper between Position 2 to Position 3 to disable the ADP2503/ADP2504 and bring the current to  $<1 \mu\text{A}$ .

#### Jumper J5

The ADP2503/ADP2504 can be configured to operate in low noise pulse width mode (PWM) or in power save mode (PSM), depending on the SYNC pin polarity. If the SYNC pin is pulled high (Position 1 and Position 2 of J5 connected together), the converter operates in forced PWM mode. If the SYNC pin is pulled low, pulse skip mode is turned on when the load current drops below approximately 75 mA.

#### Input Power Source

If the input power source includes a current meter, use that meter to monitor the input current. Connect the positive terminal of the power source to the VIN terminal on the evaluation board and connect the negative terminal of the power source to the PGND terminal of the evaluation board.

If the power source does not include a current meter, connect a current meter in series with the input source voltage. Then, connect the positive lead (+) of the power source to the ammeter positive (+) connection, the negative lead (-) of the power source to the PGND terminal on the evaluation board, and the negative lead (-) of the ammeter to the VIN terminal on the board.

#### Output Load

Connect an electronic load or resistor to set the load current. If the load includes an ammeter, or if the current is not measured, connect the load directly to the evaluation board, with the positive (+) load connection to the VOUT terminal and the negative (-) load connection to the PGND terminal.

If an ammeter is used, connect it in series with the load. Connect the positive (+) ammeter terminal to the evaluation board VOUT terminal, the negative (-) ammeter terminal to the positive (+) load terminal, and the negative (-) load terminal to the evaluation board PGND terminal.

#### Input and Output Voltmeters

Measure the input and output voltages with voltmeters. Make sure that the voltmeters are connected to the appropriate evaluation board terminals and not to the loads or power sources. If the

voltmeters are not connected directly to the evaluation board, the measured voltages are incorrect due to the voltage drop across the leads and/or connections between the evaluation board, the power source, and/or the load.

Connect the input voltage measuring voltmeter positive (+) terminal to the evaluation board VIN terminal and the negative (-) terminal to the evaluation board PGND terminal. Connect the output voltage measuring voltmeter positive (+) terminal to the evaluation board VOUT terminal and the negative (-) terminal to the evaluation board PGND terminal.

### POWERING UP THE EVALUATION BOARD

When the power source and load are connected to the ADP2503/ADP2504 evaluation board, it can be powered for operation. Ensure that the power source voltage is  $>2.5 \text{ V}$  and  $<5.5 \text{ V}$ . If using an ammeter, increase the range value to 1 A or 3 A for the initial startup.

Bring the EN pin high using J6 and monitor the output voltage. If the load is not already enabled, enable the load and verify that it is drawing the proper current and that the output voltage maintains voltage regulation.

### MEASURING EVALUATION BOARD PERFORMANCE

#### Measuring Output Voltage Ripple

To observe the output voltage ripple, place an oscilloscope probe across the output capacitor with the probe ground lead at the negative (-) capacitor terminal and the probe tip at the positive (+) capacitor terminal. Set the oscilloscope to ac, 20 mV/division time base, and 2  $\mu\text{s}$ /division time base.

#### Measuring the Switching Waveform

To observe the switching waveform with an oscilloscope, place the oscilloscope probe tip at the end of the inductor connected to the SW1 pin/SW2 pin with the probe ground at PGND. Set the oscilloscope to dc, 2 V/division time base, and 2  $\mu\text{s}$ /division time base.

#### Measuring Load Regulation

The load regulation must be tested by increasing the load at the output and looking at the change in output voltage. To minimize voltage drop, use short low resistance wires, especially for heavy loads.

#### Measuring Line Regulation

Vary the input voltage and examine the change in the output voltage.

## USING THE EVALUATION BOARD

### Measuring Efficiency

Measure the efficiency,  $\eta$ , by comparing the input power with the output power.

$$\eta = \frac{V_{OUT} \times I_{OUT}}{V_{IN} \times I_{IN}} \quad (1)$$

Measure the input and output voltages as close as possible to the input and output capacitors to reduce the effect of IR drops.

### Measuring Inductor Current

Measure the inductor current by removing one end of the inductor from its pad and connecting a current loop in series. Then, use a current probe to measure the current flowing through the current loop.

**ESD Caution**

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

**Legal Terms and Conditions**

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
