

TMUX154E ESD-Protected, Low Capacitance, 2-Channel, 2:1 Switch, With Powered-off Protection

1 Features

- V_{CC} Operation at 3 V to 4.3 V
- I/O Pins Can Tolerate up to 5.25 V
- 1.8-V Compatible Control Logic
- Supports Powered-off Protection I/O Pins Hi-Z When $V_{CC} = 0$ V
- $R_{ON} = 10 \Omega$ Maximum
- $\Delta R_{ON} = 0.35 \Omega$ Typical
- $C_{io(ON)} = 7.5$ pF Typical
- Low Power Consumption (1 μ A Maximum)
- -3 -dB Bandwidth = 900 MHz Typical
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II ⁽¹⁾
- ESD Performance Tested Per JESD 22
 - 8000-V Human-Body Model (A114-B, Class II)
 - 1000-V Charged-Device Model (C101)
- ESD Performance I/O Port to GND ⁽²⁾
 - 15000-V Human-Body Model

(1) Except \overline{EN} and SEL Inputs

(2) High-voltage HBM is performed in addition to the standard HBM testing (A114-B, Class II) and applies to I/O ports tested with respect to GND only.

2 Applications

- Portable Electronics
- Printers and other Peripherals
- Electronic Point of Sale
- Building Automation
- Servers

3 Description

The TMUX154E is a high-bandwidth 2:1 switch specially designed for the switching of high-speed signals in applications with limited I/Os. The wide bandwidth (900 MHz) of this switch allows signals to pass with minimum edge and phase distortion. The switch is bidirectional and offers little or no attenuation of high-speed signals. It is designed for low bit-to-bit skew and high channel-to-channel noise isolation.

The TMUX154E integrates ESD protection cells on all pins, is available in a tiny UQFN package (1.8 mm x 1.4 mm) or a VSSOP package, and is characterized over the free-air temperature range of -40°C to 85°C .

GND	4	5	—	Ground
VCC	9	10	—	Voltage supply

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) (see ⁽¹⁾ ⁽²⁾)

		MIN	MAX	UNIT
V_{CC}	Supply voltage	-0.5	7	V
$V_{SEL}, \overline{V_{EN}}$	Control input voltage	-0.5	7	V
$V_{I/O}$	Signal path I/O voltage	$V_{CC} > 0$	$V_{CC} + 0.3$	V
		$V_{CC} = 0$	5.25	
I_{IK}	Control input clamp current	$V_{IN} < 0$	-50	mA
$I_{I/OK}$	I/O port clamp current	$V_{I/O} < 0$	-50	mA
$I_{I/O}$	ON-state switch current		±64	mA
	Continuous current through V_{CC} or GND		±100	mA
T_{stg}	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to ground, unless otherwise specified.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	All pins	±8000
			I/O port to GND	±15000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾		±1000

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

See ⁽¹⁾.

		MIN	MAX	UNIT
V_{CC}	Supply voltage	3	4.3	V
V_{IH}	High-level control input voltage	$V_{CC} = 3\text{ V to }3.6\text{ V}$	1.3	V_{CC}
		$V_{CC} = 4.3\text{ V}$	1.7	V_{CC}
V_{IL}	Low-level control input voltage	$V_{CC} = 3\text{ V to }3.6\text{ V}$	0	0.5
		$V_{CC} = 4.3\text{ V}$	0	0.7
$V_{I/O}$	Data input/output voltage	0	V_{CC}	V
T_A	Operating ambient temperature	-40	85	°C

- (1) All unused control inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to *Implications of Slow or Floating CMOS Inputs* (SCBA004).

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TMUX154E		UNIT
		DGS (VSSOP)	RSW (UQFN)	
		10 PINS	10 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	203.1	114.5	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	88.7	64.7	°C/W
R _{θJB}	Junction-to-board thermal resistance	123.0	21.0	°C/W
ψ _{JT}	Junction-to-top characterization parameter	21.2	1.9	°C/W
ψ _{JB}	Junction-to-board characterization parameter	121.6	21.0	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.5 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽²⁾	MAX	UNIT
I _{SEL} , I _{EN}	Control inputs	V _{CC} = 4.3 V, 0 V, V _{SEL} , V _{EN} = 0 to 4.3 V			±1	μA
I _{OZ}	OFF-state leakage current ⁽³⁾	V _{CC} = 4.3 V, V _O = 0 to 3.6 V, V _I = 0, Switch OFF			±1	μA
I _{OFF}	Powered off leakage current	V _{CC} = 0 V, V _{An,Bn} = 0 V, V _{A,B} = 0 V to 4.3 V, V _{SEL} , V _{EN} = V _{CC} or GND			±2	μA
I _{CC}	Supply current	V _{CC} = 4.3 V, I _{I/O} = 0, Switch ON or OFF			1	μA
ΔI _{CC} ⁽⁴⁾	Difference of supply current due to control input voltage not V _{CC} or GND	V _{CC} = 4.3 V, V _{SEL} , V _{EN} = 2.6 V			10	μA
C _{SEL} , C _{EN}	Control inputs digital input capacitance	V _{CC} = 0 V, V _{SEL} , V _{EN} = V _{CC} or GND		1		pF
C _{I/O(OFF)}	OFF-state input capacitance	V _{CC} = 3.3 V, V _{I/O} = 3.3 V or 0, Switch OFF		2		pF
C _{I/O(ON)}	ON-state input capacitance	V _{CC} = 3.3 V, V _{I/O} = 3.3 V or 0, Switch ON		7.5		pF
R _{ON}	ON-state resistance ⁽⁵⁾	V _{CC} = 3 V, V _I = 0.4, I _O = –8 mA		6	10	Ω
ΔR _{ON}	ON-state resistance match between channels	V _{CC} = 3 V, V _I = 0.4, I _O = –8 mA		0.35		Ω
r _{on(flat)}	ON-state resistance flatness	V _{CC} = 3 V, V _I = 0 V or 1 V, I _O = –8 mA		2		Ω

(1) V_I, V_O, I_I, and I_O refer to data I/O pins A, B, An, and Bn.

(2) All typical values are at V_{CC} = 3.3 V (unless otherwise noted), T_A = 25°C.

(3) For I/O ports, the parameter I_{OZ} includes the input leakage current.

(4) This is the increase in supply current for each digital control input that is supplied with a voltage other than V_{CC} or GND.

(5) Measured by the voltage drop between the A and B terminals at the indicated current through the switch. ON-state resistance is determined by the lower of the voltages of the two (A or B) terminals.

6.6 Dynamic Electrical Characteristics

 over operating range, $T_A = -40^\circ\text{C}$ to 85°C , $V_{CC} = 3.3\text{ V} \pm 10\%$, $\text{GND} = 0\text{ V}$

PARAMETER		TEST CONDITIONS	TYP ⁽¹⁾	UNIT
X _{TALK}	Crosstalk	$R_L = 50\ \Omega$, $f = 1\ \text{MHz}$, See Figure 6	-97	dB
O _{ISO}	OFF isolation	$R_L = 50\ \Omega$, $f = 1\ \text{MHz}$, See Figure 5	-85	dB
BW	Bandwidth (-3 dB)	$R_L = 50\ \Omega$, $C_L = 5\ \text{pF}$, See Figure 7	900	MHz

 (1) For Max or Min conditions, use the appropriate value specified under [Electrical Characteristics](#) for the applicable device type.

6.7 Switching Characteristics

 over operating range, $T_A = -40^\circ\text{C}$ to 85°C , $V_{CC} = 3.3\text{ V} \pm 10\%$, $\text{GND} = 0\text{ V}$

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
t _{pd}	Propagation delay ⁽²⁾ ⁽³⁾	$R_L = 50\ \Omega$, $C_L = 5\ \text{pF}$, See Figure 8		0.25		ns
t _{ON}	Line enable time, SEL to A, B, An, or Bn	$R_L = 50\ \Omega$, $C_L = 5\ \text{pF}$, See Figure 4			30	ns
t _{OFF}	Line disable time, SEL to A, B, An, or Bn	$R_L = 50\ \Omega$, $C_L = 5\ \text{pF}$, See Figure 4			25	ns
t _{ON}	Line enable time, $\overline{\text{OE}}$ to A, B, An, or Bn	$R_L = 50\ \Omega$, $C_L = 5\ \text{pF}$, See Figure 4			30	ns
t _{OFF}	Line disable time, $\overline{\text{OE}}$ to A, B, An, or Bn	$R_L = 50\ \Omega$, $C_L = 5\ \text{pF}$, See Figure 4			25	ns
t _{SK(O)}	Output skew between center port to any other port ⁽²⁾	$R_L = 50\ \Omega$, $C_L = 5\ \text{pF}$, See Figure 9			50	ps
t _{SK(P)}	Skew between opposite transitions of the same output (t _{PHL} - t _{PLH}) ⁽²⁾	$R_L = 50\ \Omega$, $C_L = 5\ \text{pF}$, See Figure 9			20	ps

 (1) For Max or Min conditions, use the appropriate value specified under [Electrical Characteristics](#) for the applicable device type.

(2) Specified by design

(3) The bus switch contributes no propagational delay other than the RC delay of the on resistance of the switch and the load capacitance. The time constant for the switch alone is of the order of 0.25 ns for 10-pF load. Since this time constant is much smaller than the rise/fall times of typical driving signals, it adds very little propagational delay to the system. Propagational delay of the bus switch, when used in a system, is determined by the driving circuit on the driving side of the switch and its interactions with the load on the driven side.

8 Detailed Description

8.1 Overview

The TMUX154E is a high-bandwidth switch specially designed for the switching and isolating of high-speed signals in systems with limited I/Os. The wide bandwidth (900 MHz) of this switch allows signals to pass with minimum edge and phase distortion. The device multiplexes differential or single ended signals from a single device to one of two corresponding outputs or from two different different devices to one single output. The switch is bidirectional and offers little or no attenuation of the high-speed signals. It is designed for low bit-to-bit skew and high channel-to-channel noise isolation.

8.2 Functional Block Diagram

Copyright © 2018, Texas Instruments Incorporated

8.3 Feature Description

The TMUX154E has an enable pin $\overline{\text{EN}}$ that can place the signal paths in high impedance. This allows the user to isolate the signal path when it is not in use and consume less current.

8.4 Device Functional Modes

The device functional modes are shown in [Table 1](#).

Table 1. Truth Table

SEL	$\overline{\text{EN}}$	FUNCTION
X	H	Disconnect
L	L	A = A0 B = B0
H	L	A = A1 B = B1

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

There are many applications in which processors and microcontrollers have a limited number of I/Os. The TMUX154E solution can effectively expand the limited number of I/Os by switching between multiple signal paths in order to interface them to a single processor or microcontroller. TMUX154E can also be used to connect a single microcontroller to two signal paths.

9.2 Typical Application

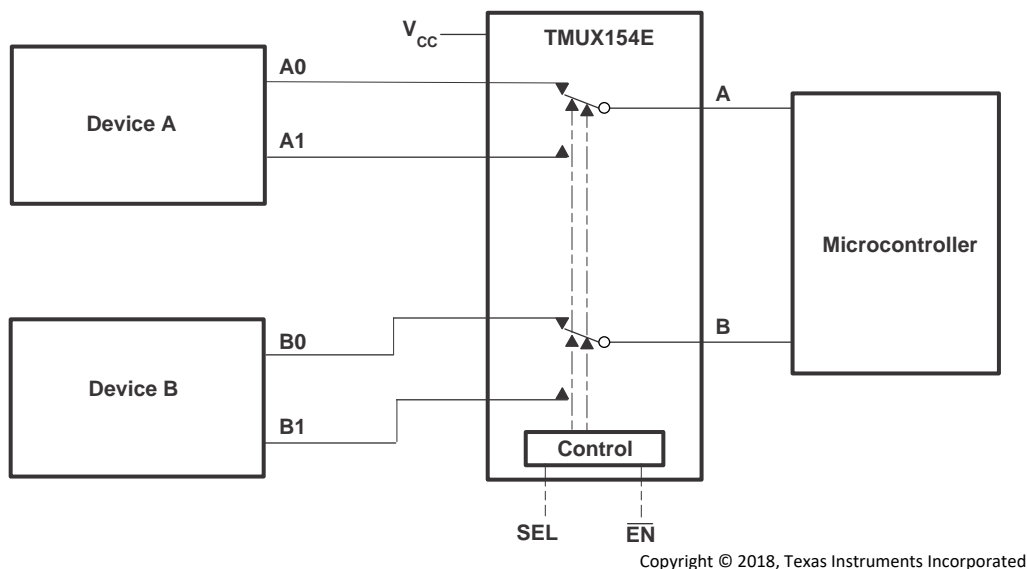

Figure 13. Application Diagram

9.2.1 Design Requirements

TI recommends that the digital control pins SEL and $\overline{\text{EN}}$ be pulled up to V_{CC} or down to GND to avoid undesired switch positions that could result from the floating pin.

9.2.2 Detailed Design Procedure

The TMUX154E can be properly operated without any external components. However, it is recommended that unused pins be connected to ground through a 50-Ω resistor to prevent signal reflections back into the device.

Typical Application (continued)

9.2.3 Application Curves

Figure 14. Bandwidth

10 Power Supply Recommendations

TI recommends placing a bypass capacitor as close as possible to the supply pin V_{CC} to help smooth out lower frequency noise to provide better load regulation across the frequency spectrum.

11 Layout

11.1 Layout Guidelines

Place supply bypass capacitors as close to V_{CC} pin as possible and avoid placing the bypass caps near the signal traces.

The high-speed traces should always be of equal length and must be no more than 4 inches; otherwise, the eye diagram performance may be degraded.

Route the high-speed signals using a minimum of vias and corners which will reduce signal reflections and impedance changes. When a via must be used, increase the clearance size around it to minimize its capacitance. Each via introduces discontinuities in the transmission line of the signal and increases the chance of picking up interference from the other layers of the board. Be careful when designing test points on twisted pair lines; through-hole pins are not recommended.

When it becomes necessary to turn 90°, use two 45° turns or an arc instead of making a single 90° turn. This reduces reflections on the signal traces by minimizing impedance discontinuities.

Do not route signal traces under or near crystals, oscillators, clock signal generators, switching regulators, mounting holes, magnetic devices, or IC's that use or duplicate clock signals.

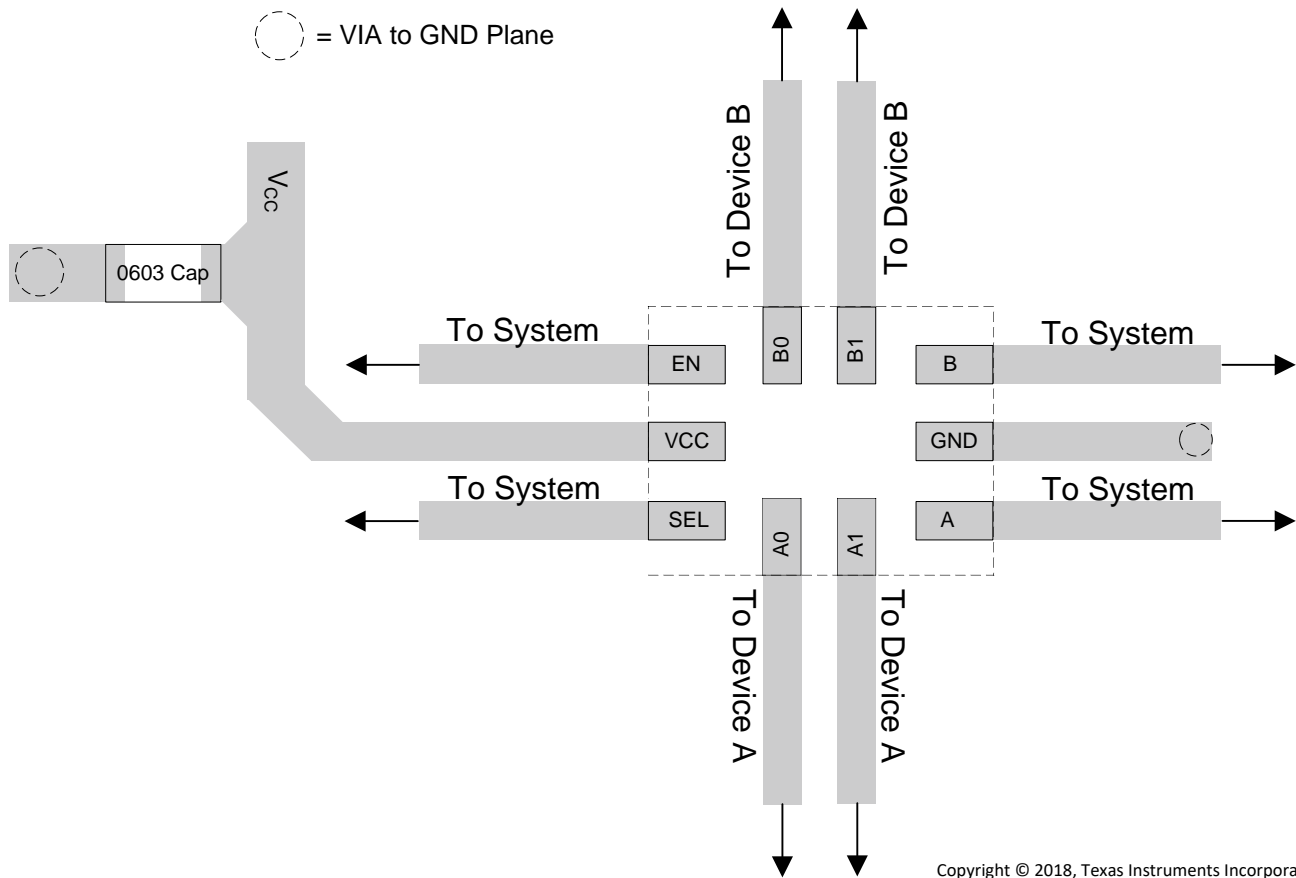

Avoid stubs on the high-speed signals because they cause signal reflections.

Route all high-speed signal traces over continuous planes (V_{CC} or GND), with no interruptions.

Avoid crossing over anti-etch, commonly found with plane splits.

For high frequency systems, a printed circuit board with at least four layers is recommended: two signal layers separated by a ground layer and a power layer. The majority of signal traces should run on a single layer, preferably Signal 1. Immediately next to this layer should be the GND plane, which is solid with no cuts. Avoid running signal traces across a split in the ground or power plane. When running across split planes is unavoidable, sufficient decoupling must be used. Minimizing the number of signal vias reduces EMI by reducing inductance at high frequencies. For more information on layout guidelines, see *High Speed Layout Guidelines (SCAA082)*

TI E2E™ Online Community *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

12.4 Trademarks

E2E is a trademark of Texas Instruments.

All other trademarks are the property of their respective owners.

12.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TMUX154EDGSR	ACTIVE	VSSOP	DGS	10	2500	RoHS & Green	NIPDAUAG SN	Level-1-260C-UNLIM	-40 to 85	1A6	Samples
TMUX154ERSWR	ACTIVE	UQFN	RSW	10	3000	RoHS & Green	NIPDAU	Level-1-260C-UNLIM	-40 to 85	BXV	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

9. Board assembly site may have different recommendations for stencil design.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATA SHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#) or other applicable terms available either on [ti.com](https://www.ti.com) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
