SCDS185C – JANUARY 2005 – REVISED SEPTEMBER 2012

## 10-Ω SPST ANALOG SWITCH

Check for Samples: TS5A1066

#### **FEATURES**

- Low ON-State Resistance (10 Ω)
- Control Inputs Are 5.5-V Tolerant
- Low Charge Injection
- Low Total Harmonic Distortion (THD)
- 1.65-V to 5.5-V Single-Supply Operation
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Performance Tested Per JESD 22
  - 2000-V Human-Body Model (A114-B, Class II)
  - 1000-V Charged-Device Model (C101)

### **DESCRIPTION/ORDERING INFORMATION**

The TS5A1066 is a single-pole single-throw (SPST) analog switch that is designed to operate from 1.65 V to 5.5 V. This device can handle both digital and analog signals, and signals up to  $V_+$  (peak) can be transmitted in either direction.

Configuration	Single-Pole, Single-Throw Demultiplexer (1 × SPST)
Number of channels	1
ON-state resistance (ron)	7.5 Ω
ON-state resistance flatness (ron(flat))	2.5 Ω
Turn-on/turn-off time (t <sub>ON</sub> /t <sub>OFF</sub> )	9.5 ns/2 ns
Charge injection (Q <sub>C</sub> )	1 pC
Bandwidth (BW)	400 MHz
OFF isolation (O <sub>ISO</sub> )	–68 dB at 10 MHz
Total harmonic distortion (THD)	0.14%
Leakage current (I <sub>COM(OFF)</sub>	±0.1 μΑ
Power-supply current (I+)	0.05 µA
Package options	5-pin DSBGA, SOT-23, or SC-70

#### Table 1. SUMMARY OF CHARACTERISTICS

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

#### Table 2. ORDERING INFORMATION

T <sub>A</sub>	PACKAGE <sup>(1)</sup>		ORDERABLE PART NUMBER	TOP-SIDE MARKING <sup>(2)</sup>
–40°C to 85°C	NanoFree™ – WCSP (DSBGA) 0.23-mm Large Bump – YZP (Pb- free)	Tape and reel	TS5A1066YZPR	JD_
	SOT (SOT-23) – DBV	Tape and reel	TS5A1066DBVR	JAD_
	SOT (SC-70) – DCK	Tape and reel	TS5A1066DCKR	JD_

(1) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

(2) DBV/DCK: The actual top-side marking has one additional character that designates the assembly/test site. YZP: The actual top-side marking has three preceding characters to denote year, month, and sequence code, and one following character to designate the assembly/test site. Pin 1 identifier indicates solder-bump composition (1 = SnPb, • = Pb-free).

FUNCTIC	FUNCTION TABLE								
IN	NO TO COM, COM TO NO

Н	ON								

### Absolute Minimum and Maximum Rating<sup>(1) (2)</sup>

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V+	Supply voltage range <sup>(3)</sup>		-0.5	6.5	V
V <sub>NO</sub> V <sub>COM</sub>	Analog voltage range <sup>(3) (4) (5)</sup>		-0.5	V <sub>+</sub> + 0.5	V
Ι <sub>Κ</sub>	Analog port diode current	$V_{NO}$ , $V_{COM} < 0$ or $V_{NO}$ , $V_{COM} > V_{+}$	-50	50	mA
I <sub>NO</sub> I <sub>COM</sub>	On-state switch current	$V_{NO}$ , $V_{COM} = 0$ to $V_{+}$	-50	50	mA
VI	Digital input voltage range <sup>(3)</sup> <sup>(4)</sup>		-0.5	6.5	V
I <sub>IK</sub>	Digital input clamp current	V <sub>I</sub> < 0	-50		mA
I₊ I <sub>GND</sub>	Continuous current through each $V_{+}$ or GND		-100	100	mA
		DBV package		206	
$\theta_{JA}$	Package thermal impedance <sup>(6)</sup>	DCK package		252	°C/W
		YZP package		132	
T <sub>stg</sub>	Storage temperature range		-65	150	°C

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum.

(3) All voltages are with respect to ground, unless otherwise specified.

(4) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

(5) This value is limited to 5.5 V maximum.

(6) The package thermal impedance is calculated in accordance with JESD 51-7.

#### Table 3. PIN DESCRIPTION

PIN	NAME	DESCRIPTION
1	NO	Normally open
2	COM	Common
3	GND	Digital ground
4	IN	Digital control to connect COM to NO
5	V <sub>+</sub>	Power supply

#### **Table 4. PARAMETER DESCRIPTION**

SYMBOL	DESCRIPTION
V <sub>COM</sub>	Voltage at COM
V <sub>NO</sub>	Voltage at NO
<b>r</b> on	Resistance between COM and NO ports when the channel is ON
r <sub>on(flat)</sub>	Difference between the maximum and minimum value of ron in a channel over the specified range of conditions
I <sub>NO(OFF)</sub>	Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the OFF state
I <sub>NO(ON)</sub>	Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the ON state and the output (COM) open
I <sub>COM(OFF)</sub>	Leakage current measured at the COM port, with the corresponding channel (COM to NO) in the OFF state
I <sub>COM(ON)</sub>	Leakage current measured at the COM port, with the corresponding channel (COM to NO) in the ON state and the output (NO) open
V <sub>IH</sub>	Minimum input voltage for logic high for the control input (IN)
V <sub>IL</sub>	Maximum input voltage for logic low for the control input (IN)
VI	Voltage at the control input (IN)
I <sub>IH</sub> , I <sub>IL</sub>	Leakage current measured at the control input (IN)
t <sub>ON</sub>	Turn-on time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog output (COM or NO) signal when the switch is turning ON.
t <sub>OFF</sub>	Turn-off time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog output (COM or NO) signal when the switch is turning OFF.
Q <sub>C</sub>	Charge injection is a measurement of unwanted signal coupling from the control (IN) input to the analog (NO or COM) output. This is measured in coulomb (C) and measured by the total charge induced due to switching of the control input. Charge injection, $Q_C = C_L \times \Delta V_{COM}$ , $C_L$ is the load capacitance and $\Delta V_{COM}$ is the change in analog output voltage.
C <sub>NO(OFF)</sub>	Capacitance at the NO port when the corresponding channel (NO to COM) is OFF
C <sub>NO(ON)</sub>	Capacitance at the NO port when the corresponding channel (NO to COM) is ON
C <sub>COM(OFF)</sub>	Capacitance at the COM port when the corresponding channel (COM to NO) is OFF
C <sub>COM(ON)</sub>	Capacitance at the COM port when the corresponding channel (COM to NO) is ON
CI	Capacitance of IN
O <sub>ISO</sub>	OFF isolation of the switch is a measurement of OFF-state switch impedance. This is measured in dB in a specific frequency, with the corresponding channel (NO to COM) in the OFF state.
BW	Bandwidth of the switch. This is the frequency in which the gain of an ON channel is -3 dB below the DC gain.
THD	Total harmonic distortion is defined as the ratio of the root mean square (RMS) value of the second, third, and higher harmonics to the magnitude of fundamental harmonic.
I+	Static power-supply current with the control (IN) pin at $V_+$ or GND
$\Delta I_+$	This is the increase in $I_+$ for each control (IN) input that is at the specified voltage, rather than at V <sub>+</sub> or GND.

<sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

<sup>(3)</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

<sup>(4)</sup> There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

<sup>(5)</sup> Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
