MARKING

# Synchronous Presettable **Binary Counter**

# MC74AC161, MC74ACT161, MC74AC163, MC74ACT163

The MC74AC161/74ACT161 and MC74AC163/74ACT163 are high-speed synchronous modulo-16 binary counters. They are synchronously presettable for application in programmable dividers and have two types of Count Enable inputs plus a Terminal Count output for versatility in forming synchronous multistage counters.

The MC74AC161/74ACT161 has an asynchronous Master Reset input that overrides all other inputs and forces the outputs LOW. The MC74AC163/74ACT163 has a Synchronous Reset input that overrides counting and parallel loading and allows the outputs to be simultaneously reset on the rising edge of the clock.

### Features

- Synchronous Counting and Loading
- High–Speed Synchronous Expansion
- Typical Count Rate of 125 MHz
- Outputs Source/Sink 24 mA
- 'ACT161 and 'ACT163 Have TTL Compatible Inputs
- These are Pb-Free Devices

### **ORDERING INFORMATION**

See detailed ordering and shipping information in the package dimensions section on page 11 of this data sheet.

\*SR for '163

Figure 2. Logic Symbol

### **FUNCTIONAL DESCRIPTION**

The MC74AC161/ACT161 and MC74AC163/ACT163 count modulo–16 binary sequence. From state 15 (HHHH) they increment to state 0 (LLLL). The clock inputs of all flip–flops are driven in parallel through a clock buffer. Thus all changes of the Q outputs (except due to Master Reset of the '161) occur as a result of, and synchronous with, the LOW–to–HIGH transition of the CP input signal. The circuits have four fundamental modes of operation, in order of precedence: asynchronous reset ('161), synchronous reset ('163), parallel load, count–up and hold. Five control inputs – Master Reset (MR, '161), Synchronous Reset (SR, '163), Parallel Enable (PE), Count Enable Parallel (CEP) and Count Enable Trickle (CET) – determine the mode of

| MODE SELECT TABLE |
|-------------------|
|-------------------|

| * <del>SR</del> | PE | CET | CEP | Action on the Rising<br>Clock Edge() |
|-----------------|----|-----|-----|--------------------------------------|
| L               | Х  | Х   | х   | Reset (Clear)                        |
| Н               | L  | Х   | Х   | Load $(P_n \rightarrow Q_n)$         |
| Н               | н  | н   | н   | Count (Increment)                    |
| н               | н  | L   | Х   | No Change (Hold)                     |
| Н               | Н  | Х   | L   | No Change (Hold)                     |

\*For '163 only

H = HIGH Voltage Level

L = LOW Voltage Level

X = Immaterial

operation, as shown in the Mode Select Table. A LOW signal on  $\overline{\text{MR}}$  overrides all other inputs and asynchronously forces all outputs LOW. A LOW signal on  $\overline{\text{SR}}$  overrides counting and parallel loading and allows all outputs to go LOW on the next rising edge of CP. A LOW signal on  $\overline{\text{PE}}$  overrides counting and allows information on the Parallel Data (P<sub>n</sub>) inputs to be loaded into the flip-flops on the next rising edge of CP. With  $\overline{\text{PE}}$  and  $\overline{\text{MR}}$  ('161) or  $\overline{\text{SR}}$  ('163) HIGH, CEP and CET permit counting when both are HIGH. Conversely, a LOW signal on either CEP or CET inhibits counting.

The MC74AC161/ACT161 and MC74AC163/ACT163 use D-type edge-triggered flip-flops and changing the  $\overline{SR}$ ,  $\overline{PE}$ , CEP and CET inputs when the CP is in either state does not cause errors, provided that the recommended setup and hold times, with respect to the rising edge of CP, are observed.

The Terminal Count (TC) output is HIGH when CET is HIGH and counter is in state 15. To implement synchronous multistage counters, the TC outputs can be used with the CEP and CET inputs in two different ways. Please refer to the MC74AC568 data sheet. The TC output is subject to decoding spikes due to internal race conditions and is therefore not recommended for use as a clock or asynchronous reset for flip–flops, counters or registers. Logic Equations:

> Count Enable =  $CEP \cdot CET \cdot \overline{PE}$ TC =  $Q_0 \cdot Q_1 \cdot Q_2 \cdot Q_3 \cdot CET$

NOTES:

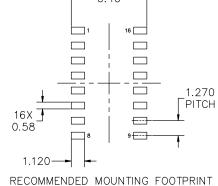

- 1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 2018.
- 2. DIMENSION IN MILLIMETERS. ANGLE IN DEGREES.
- 3. DIMENSIONS D AND E1 DO NOT INCLUDE MOLD PROTRUSION.
- 4. MAXIMUM MOLD PROTRUSION 0.15mm PER SIDE.
- DIMENSION & DOES NOT INCLUDE DAMBAR PROTRUSION. ALLOWABLE DAMBAR PROTRUSION SHALL BE 0.127mm TOTAL IN EXCESS OF THE & DIMENSION AT MAXIMUM MATERIAL CONDITION.
