On-Board Jumper Options

Default Jumper Setting

R4	R5	R7	Description
Close	Open	Open	OLED controller + Boost converter + OLED panel are powered from V_{DD} (pin #2). This allows the full module to be powered by a single low-voltage supply.

Jumper Option #1 - Independent Supply Voltage for Boost Converter (BC_VDD)

R4	R5	R7	Description
Open	**Close**	Open	Boost converter + OLED panel are powered from BC_V_{DD} (pin #3). OLED controller is still powered from V_{DD} (pin #2). This allows for increased efficiency through the boost converter by allowing a higher supply voltage at its input, BC_V_{DD} (pin #3).

Jumper Option #2 – External Supply Voltage for OLED Panel (VCC)

R4	R5	R7	Description
Open	Open	**Close**	OLED panel is powered from V_{CC} (pin #15) – boost converter is not used. OLED controller is still powered from V_{DD} (pin #2). This allows for maximum module efficiency, and drastically reduced total current consumption.
